UC-03

UNIQUE PLAIN AND DOUBLE LIPPER CUTTING MACHINE

1,5-3 pt. 8-30 mm.

This is a practical and fast cutting machine used in the manufacturing of package cutting moulds. By this machine, it is possible for you to cut rule-pillage-perforation-combi etc. type mould materials in height of 8 - 30 mm and in thickness of 1.5-3 pt (0.50 -1,05mm) as plain and with double lipper. This machine, thanks to its high eccentric power, allows you the possibility of performing successive bending operation without causing any difficulty. In cutting with lipper, lipper angle is 54 degrees which is the angle of knives with standard center bevel. (Optionally, cutting bevels with other angles are also produced.)

COVERING WITH CHROME NITRIDE

With the purpose of enabling the machine bodies to be resistant against corruptions and strokes for years, it has been made of steel and its slide systems have been stoned in a sensitive way. By this means, life of the cutting edges has been prolonged and cutting precision has been increased.

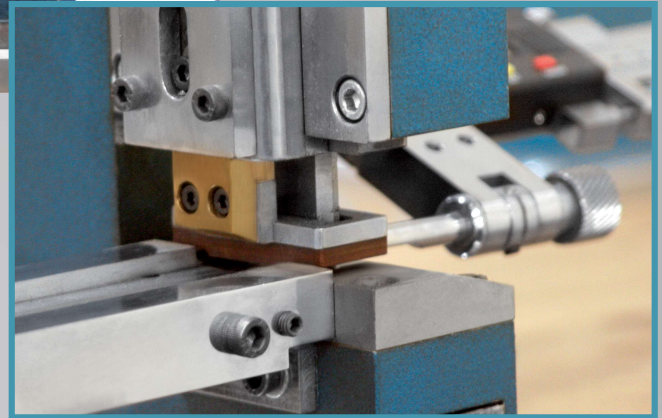

Cutting edges is made of powder metal product imported steels and are passed through the most suitable heat treatment for the cutting operation. In order to increase the resistance of the cutting edges against corrosion and cutting, all our knives are covered with TiN (titanium). TiN covering provides a 50-70 percent increase in the number of cutting and as it is protected against side corruptions, it increases the life of the rule 4-5 times.

PRECISE CUTTING

Our double lipper model is equipped with pre-cutting rule keeping system that increases the cutting precision. Besides, by this means system, you can cut even the very small parts without slipping and minimize the loss.

For your cutting operation, posing caliper system that you need is digital, you can perform cutting operations with a precision from 0,01 to 500 mm (500-1000 mm optional). With the digital caliper, cutting provides you with fast and net results.

NO MORE CORROSION AND RUSTING

All parts of the machine have been covered with CrN (chrome nitride) which is a special casing type that is resistant against corrosion and rusting for long years.

In all Unique eccentric systems, beddings are carried out by rollers and by this way, corrosion spaces are prevented which may occur in the course of time.

The machine is guaranteed by our firm for a period of 1 year.
