

EasyBender Rotary

With Over 300 EasyBenders installed in North America, EasyBenders have outsold all other systems. Why do diemakers worldwide use more EasyBenders than any other system? Because they're faster, better built, more reliable, and have the best service and customer support in the industry! And with EasyBender's patented* bending mechanism, EasyBender can bend shapes other systems simply cannot. EasyBender Rotary uses that same patented* robust design to bend curved rule. EasyBender Rotary will revolutionize rotary cutting die production in the same way our EasyBender Turbo processor / benders have revolutionized flat cutting die production. Companies who invested in our original EasyBender were industry leaders who thrived and grew even in difficult economic times. Likewise, EasyBender Rotary will give your company the advantage in today's competitive climate. Call to arrange a demo of the EasyBender Rotary today! You'll be glad you did!
